

SL20-22P Venetian

ScreenLine® SL20-22P is a patented magnetic system with manual operation for venetian blinds incorporated within 20 or 22-mm insulating glass units.

It is designed to perform a tilt-only function of the blinds by means of an external knob that is secured to the window frame: the glass appears completely clear, easy to be cleaned and free from external devices.

The internal magnetic device transmitting motion from the knob to the blind is completely concealed and sealed within the window frame, so as to ensure with time the insulating properties of the double-glazing unit, notably protection from dirt or weather conditions.

Due to the narrow cavity (20/22 mm), the system can be used in almost all types of existing window frames, whilst the special design allows the aesthetic quality to be maintained in whatever environment it is installed.

These features make ScreenLine® SL20-22P ideal for public places such as hospitals or government offices, where a variety of people needs to operate an easy-to-use yet highly protected system.

System SL22P is supplied with warm edge spacer bars as standard.

The external knob is treated with a Sanitized®* patented finish, which provides a long-lasting antimicrobial protection function.

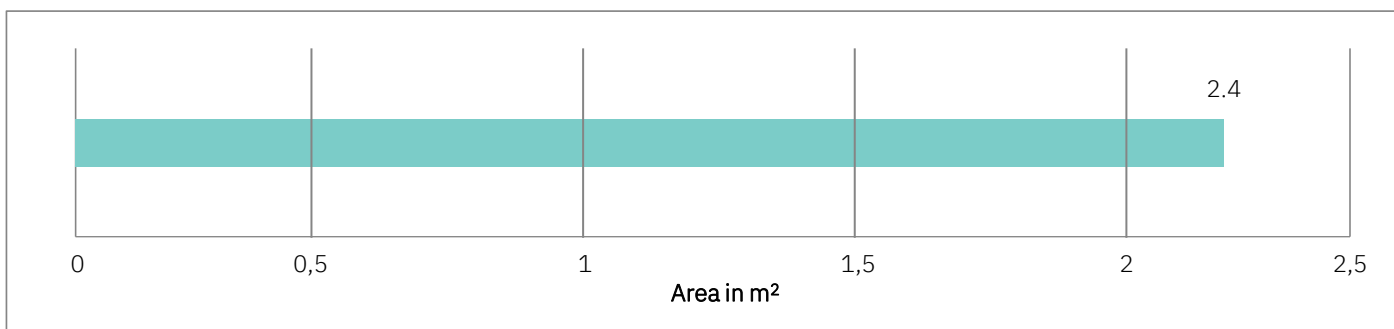

* Active biocidal substance: silver borophosphate glass
